SKILLS

- **Languages**: C++, Python, JavaScript
- **Frameworks**: HTML and CSS, Bootstrap, NodeJS, React, Pandas, NumPy, Matplotlib
- **Tools/Platforms**: MySQL, Git, GitHub, VSCode, Jupyter Notebook
- **Soft Skills**: Problem-Solving, Team Work, Leadership, Adaptability

PROJECTS

Train Platform Allotment System | GitHub — June' 25- July' 25

- Developed a Train Platform Allotment System to compute the minimum number of platforms required using a greedy scheduling algorithm.
- Implemented platform allocation logic in C++ using Priority Queue (Min-Heap) to efficiently reuse platforms based on departure times.
- Built an interactive web interface using HTML, CSS, and JavaScript for dynamic input handling, validation, and real-time allocation display.
- Integrated client-side validation and formatted time conversion (HH:MM) for improved user experience.

Tech Stack: C++, STL (Priority Queue), HTML, CSS, JavaScript

Credit Card Customer Segmentation & Predictive Analysis — Oct' 25- Nov' 25

- Constructed a K-Means–based customer segmentation system to analyze credit card user behavior using financial and interaction metrics, optimized using the Elbow Method.
- Visualized customer clusters and centroids with Matplotlib to improve interpretation of spending capacity and digital engagement patterns.
- Integrated Random Forest and KNN models with cross-validation to accurately predict customer clusters, including real-time prediction for new customers.

Tech Stack: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter Notebook

Population Analysis Dashboard | Link — Apr' 25- May' 25

- Built an interactive Excel-based analysis dashboard using PivotTables, slicers, and dynamic charts to visualize key business metrics with real-time filtering.
- Performed comprehensive data cleaning, transformation, and standardization using Power Query to ensure accuracy, consistency, and reliability of insights.
- Optimized an intuitive dashboard layout with trend charts, and category-wise breakdowns to support quick decision-making for stakeholders.
- Automated recurring calculations with advanced Excel functions such as XLOOKUP, INDEX-MATCH, dynamic arrays, and conditional formatting to highlight performance patterns.

Tech Stack: Microsoft Excel, Power Query, PivotTables, Data Visualization

TRAINING

Apna College – Web Development — Jun' 25- Jul' 25

- Engineered a full-stack Zerodha clone enabling users to view live stock data, manage portfolios, and execute simulated buy/sell trades through an interactive trading dashboard.
- Achieved efficient dynamic user interfaces, smooth conflict resolution, resulting in a fast, reliable, and user-friendly interactive features.

CERTIFICATES

- Python Programming - Code Chef | Link — Sep' 25
- UX for Web Developers - Code Chef | Link — Aug' 25
- Introduction to Generative AI - Coursera | Link — Feb' 24
- Databases and SQL for Data Science with Python - Coursera | Link — Jan' 24

ACHIEVEMENTS

- Solved 100+ coding problems in Code Chef and Leet Code to sharpen problem-solving skills. — Dec' 25
- Maintained a Code Chef rating of 824 in Division 4 with regular participation in rated contests. — Nov' 25

EDUCATION

Lovely Professional University — Phagwara, Punjab
Bachelor of Technology - Computer Science and Engineering; ***CGPA: 6.96*** — *Since Aug' 23*

B.C.M. Arya Model Sr. Sec. School — Ludhiana, Punjab
Intermediate; ***Percentage: 79.8%*** — *Apr' 22 – Mar' 23*

B.C.M. Arya Model Sr. Sec. School — Ludhiana, Punjab
Matriculation; ***Percentage: 92%*** — *Apr' 20 – Mar' 21*
